Behind the lens: Anthony Remy, wildlife photographer

You may not know Anthony Remy's name but you will almost certainly have seen one of his photos. He spoke to us about his 30-year career close-up with wildlife.

Where did your interest in wildlife photography come from?

I grew up in Canada with nature right on my doorstep. I just had to step outside and I could see all manner of mammals, reptiles, birds and amphibians. One day my older cousin, Julian, took me to see a grizzly fishing with her cub ... from a safe distance, of course. Julian passed me his camera so that I could zoom in. It was great to watch them so closely, I never wanted to forget it. I pressed the shutter and that's when I decided what I wanted to do for the rest of my life.

Is it easy to find work? I imagine it's quite difficult.

It is at first when no one knows your name and you don't have any contacts at magazines. Over time your reputation grows. You ask local shops to put up framed photos or sell some of your cards ... you know, anything to make a living!

I guess you're asked this a lot but what's your favourite animal?

Well ... I love dogs ... I have four at home. In terms of photography though orang-utans without a doubt. Their name literally means 'person of the forest' in Malay and you can see why. It's not just their body language and facial expressions that are so like ours, but also their social interactions. Over my career I've also taken a lot of photos of spiders, which you may not understand! But most people come to realise, like me, that up close they are unexpectedly fascinating.

And which animal don't you enjoy taking photos of?

Well some animals are so 'seen' there are hundreds of photographs of them ... you know, elephants, eagles, tigers. It isn't easy to take something amazing that everyone would be interested in. Certain types of monkeys are challenging too as they don't want to make eye contact with people. Then there are lemurs which will look you in the eye, in fact they'll climb all over you, but they live deep in the Madagascan rainforest. Habitats like that are hard to get to, especially carrying camera equipment.

So any top tips for future wildlife photographers out there?

Don't rush out and spend a fortune on a new camera. It really isn't the most important thing. An interest in animals is obvious but essential. Unless you are incredibly lucky, be prepared for uncomfortable hours or even weeks waiting for the perfect shot. Researching habitats and life cycles can certainly help this. If you watch an animal for long enough, you can predict its behaviour. For example, I always know when a grizzly will swipe for the salmon and so I am there ready to capture the moment.

SPEAKING**A** Read the tips about what makes a good animal picture. Do you agree? Add a tip of your own.

- ✓ It's important to show the animal in its natural habitat.
- ✓ It's important to be able to see the animal's face and eyes. It gives an idea of how the animal is feeling or what it's thinking.
- ✓ It's good to photograph the animal doing something. It's even better to catch it doing something unusual or maybe something funny.
- ✓ A good animal picture shows detail and colour that you don't normally see.
- ✓ A good picture is one where you see something new. You learn something about the animal.

B Look at the pictures (a–f) above and answer the questions.

- Which of the features in the tips above does each picture have?
- Choose the best animal picture in your opinion.
- Put the others in order of second favourite, third favourite.

READING

A Work in pairs. Discuss the questions.

- 1 Do you recycle? What kind of things do you recycle? Is it easy to recycle things where you live? What happens to things you throw away that are not recycled?
- 2 Look at the picture. What can you see on the beach? How do you think it got there?

B **READ FOR GIST** Read *The nightmare of Plastic Island* and decide which is the best summary.

- a Plastic is often blown into the sea and is carried around the world by ocean currents. The pictures of Henderson Island show how we should clean the beaches before the plastic enters the sea.
- b Plastic is carried to certain parts of the world by ocean currents, but it does not reach other parts of the world. The pictures of Henderson Island suggest that the situation is worse than it actually is.
- c Plastic is carried around the world by ocean currents and reaches the most remote beaches and other places. The pictures of Henderson Island show how serious the problem is.

C **READ FOR DETAIL** Answer the questions. Use the information in the box to help you. Then read again and check your answers.

Looking for ways of expressing cause and effect

Look for verbs, linking words and nouns that express cause and effect:

- **verbs:** *This means there are ... This has led to ...*
- **linking words:** *This is because ... Because of this, ... If we do this, ...*
- **nouns:** *And as a result, ...*

- 1 Why is there plastic everywhere?
- 2 Why was plastic successful when it first appeared?
- 3 Scientists believe that there are five trillion pieces of plastic in the oceans. What is this number based on?
- 4 Some marine animals eat plastic. How can this affect humans?
- 5 Experts believe plastic pollution in the oceans is a serious problem. How have some governments responded to this?
- 6 What can individuals do to help reduce the amount of plastic pollution?

The nightmare of PLASTIC ISLAND

Plastic is everywhere. It is at the bottom of the oceans, on tropical beaches and at the top of Mount Everest. It is even on the surface of Mars. This is because each year, over 300 million tonnes of plastic is produced, used and then most of it is thrown away.

Plastic was invented over 100 years ago. When it first appeared, it was an instant success. It was cheap, convenient, had many uses and was long-lasting. And that is the problem. Plastic will not go away. It may break into smaller and smaller pieces, but every piece of plastic ever made still exists somewhere in the world.

Up to 12 million tonnes of plastic enters the world's oceans every year. This means there are around five trillion pieces of plastic currently in our oceans. Once there, it can be carried by the currents for many years and travel thousands of kilometres. Some of it is eaten by marine wildlife and enters the food chain. As a result, thousands of pieces of marine plastic are consumed by humans each year when they eat fish and other seafood. However, most of the plastic in the seas and oceans eventually washes up on beaches. Nowhere on Earth has as much plastic as the beaches of Henderson Island in the South Pacific. The remote island is the most polluted anywhere in the world, and 99.8 per cent of this pollution is plastic. The island's beaches contain around 38 million pieces of plastic; most of this is from everyday consumer goods.

Henderson Island is a UNESCO World Heritage site and it is an important habitat for wildlife. Jennifer Lavers, of the University of Tasmania, says that the situation on Henderson Island shows that 'nowhere is safe from plastic pollution'. She even believes that marine plastic pollution is 'as important as climate change'. Other experts describe the situation as 'a major ecological disaster' and 'an environmental emergency'. Because of this, there is a global effort to reduce the amount of plastic pollution. For example, Indonesia has promised to spend up to \$1 billion on reducing plastic and other waste products which pollute its waters. This has led to other governments making similar pledges. However, the best way to prevent rubbish from washing up on beaches is for us as individuals to use less plastic, especially things that we don't even need. These are single-use and 'disposable' items, such as cutlery and even toothbrushes. We can also buy products with less packaging and recycle more. If we do this, we will reduce the amount of plastic that ends up in our oceans and on our beaches. We will also be less likely to find plastic returning to us on our dinner plates.

Glossary

- consumer goods (n)** things you buy for personal or home use, such as food and clothing
- current (n)** a strong movement of water in one direction
- marine (adj)** living or happening in the sea
- remote (adj)** far away from other cities, towns or people

C SPEAK Rewrite the sentences in Exercise B using your own ideas. Then work in pairs and share your ideas. Ask questions to find out more information.

I'd like to live in a village – ideally, somewhere with a few shops and surrounded by nice countryside.

SPEAKING HUB

A You are going to do the Plastic Challenge. Read about the Plastic Challenge, which is organised by the Marine Conservation Society.

The Plastic Challenge asks people to stop using plastic items for as long as they can. This could be for a day, a week or a month. Our message is 'reduce, reuse, recycle'. We're challenging people to give up their single-use plastics, such as pre-packed sandwiches, ready meals, bottled drinks and so on. Do the Plastic Challenge and you'll never look at your shopping in the same way again!

B PLAN Spend a few minutes thinking about the following.

- Make a list of all the plastic you have used ...
 - today.
 - in the last week.
 - How much of this was single-use items?
- Imagine you are going to do the Plastic Challenge.
 - Which items would be easier to stop using and which would be more difficult?
 - What changes would you need to make in your daily life to do the challenge?
 - How long do you think you could do the challenge for?

C DISCUSS Work in groups.

- Compare and discuss your lists and your ideas about the Plastic Challenge.
- Decide on a plan for doing the Plastic Challenge. You must agree to do the same things.

○ Talk about the causes and effects of plastic pollution

Social media

Social media is everywhere and is a normal part of many people's lives. However, experts agree that the way we use social media will change in the future.

Ten years ago, people used social media to share messages. Then everyone got cameras on their phones and began sharing pictures and video. But if Mark Zuckerberg of Facebook is right, you and your friends will soon put on your VR (Virtual Reality) headsets and meet in amazing 3D virtual worlds. Zuckerberg and Facebook are spending a lot of money on developing VR social media.

With VR social media, it will be possible to meet your friends 'inside' pictures and videos. This means, for example, that you will be able to spend time together at the top of mountains or the bottom of oceans! It will also be possible to hang out in virtual versions of real clubs or museums, or just about anywhere in the world (or the universe) you can imagine.

There is still a lot of work to do on the technology, so you might have to wait a while before you can share your selfies from the far side of the moon! However, experts agree that VR is the future of social media.

Glossary
